

RESPeCT Summer Institute Professional Development Leader Guide (PDLG)

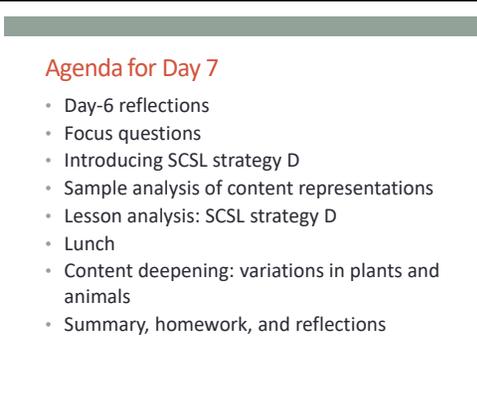

Grade Level	1	Day	7	STeLLA Strategy	SCSL Strategy D: Select Content Representations and Models	Subject Matter Focus	Variations in Plants and Animals (VPA)
Focus Questions	<ul style="list-style-type: none"> • How do you know when a content representation is appropriate and matched to the main learning goal? • How can we engage students in using content representations and models in meaningful ways? • How can we design experiments to test for genetic and environmental causes of trait variation? • How would biologists explain how a trait changes within a population over time? 						
Main Learning Goals	<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • Content representations can be helpful tools if they're matched to the learning goal of a lesson, are scientifically accurate, and address common student misconceptions. In addition, they must be comprehensible to students without reinforcing or introducing misconceptions and without distracting students with too many details or new terms. • To ensure meaningful learning from content representations, students need to be engaged in modifying or creating the representations, in analyzing their meaning, and in critiquing them. • Inherited (genetic) characteristics influence how likely an organism is to survive and reproduce. • Some traits and trait variations in individual plants or animals of the same kind can confer an advantage that enables them to survive long enough to reproduce. • Individual plants or animals of the same kind that are more likely to survive and reproduce are also likely to pass on their genetic (inherited) characteristics to their offspring. • Organisms with certain trait variations become more common in different environmental situations. • In any particular environment, the survival and growth of organisms depend on physical conditions. • Natural selection is a nonrandom evolutionary process resulting from trait variation, inheritance of trait variation among offspring, selection of offspring that are better equipped to compete for limited resources, and adaptation as the frequencies of traits and the genes that code for them change within a population over time. 						
Preparation				Materials		Videos	
<p>Daily Setup Tasks</p> <ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good sound. • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p>				<p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-7 Agenda (chart) • Norms for Working Together (chart) • Day-7 Focus Questions (chart) • Strategy charts from days 1–6 (STL strategies 1–7 and SCSL strategies A, B, C, and I) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Z-fold summary chart: Science Content Storyline 		<ul style="list-style-type: none"> • <u>Video Clip 7.1</u>: Bernstein classroom (SCSL strategy D); 7.1_mspcp_gr.1.tav_bernstein_L3_c3 <p>Content deepening:</p> <ul style="list-style-type: none"> • <i>The Making of the Fittest: Natural Selection and Adaptation</i> short film (10:25); http://www.hhmi.org/biointeractive/making-fittest-natural-selection-and-adaptation 	

<ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. • Review the reflections from day 6 and create a summary slide. • Watch the video clips and anticipate participant responses. • Prepare charts for the day’s agenda and focus questions. • For content deepening: <ul style="list-style-type: none"> • Download or prepare to stream the short film <i>The Making of the Fittest: Natural Selection and Adaptation</i>. 	<p>Lens Strategies</p> <p>Handouts in RESPeCT PD Binder, Day 7</p> <ul style="list-style-type: none"> • 7.1 Analysis Guide D: Selecting and Using Content Representations (5 copies: 3 for sample analysis of content representations, 1 for video-based lesson analysis, and 1 for content deepening analysis) • 7.2 Transcript for Video Clip 7.1 • 7.3 Novelty-Seeking-Behavior Survey • 7.4 Counting Seeds (1 per pair) • 7.5 Increasing Seeds (Excel spreadsheet) • 7.6 Developing an Explanation for Mouse Fur Color • 7.7 Natural-Selection Explanation Table • 7.8 Daily Reflections—Day 7 <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers • Lesson materials kit • For content deepening: <ul style="list-style-type: none"> • Cottonwood-seed model (from VPA lesson 3) • Apple (1 per pair) • Knife • 10 napkins or paper towels <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet • RESPeCT PD program binder • RESPeCT lesson plans binder <p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p> <ul style="list-style-type: none"> • Variations in Plants and Animals and Variation in Traits Content Background Document • Common Student Ideas about Variations in Plants and Animals 	
--	--	--

DAY 7 SESSION OUTLINE

Time	Activities	Purpose
8:00–8:25 25 min	Getting Started: Housekeeping, Agenda, Day-6 Reflections, Norms, Focus Questions	<ul style="list-style-type: none"> • Build community by sharing participants’ reflections from day 6. • Set the stage for a day of learning.
8:25–9:00 35 min	Introducing SCSL Strategy D	<ul style="list-style-type: none"> • Deepen participants’ knowledge of the purpose and key features of SCSL strategy D.
9:00–10:20 80 min (Includes 10-min break)	Sample Analysis of Content Representations	<ul style="list-style-type: none"> • Develop participants’ ability to analyze content representations to determine how well they match the main learning goal. • Deepen participants’ science-content knowledge as it emerges from analyzing content representations.
10:20–12:00 100 min	Lesson Analysis: SCSL Strategy D	<ul style="list-style-type: none"> • Develop participants’ ability to analyze content representations to determine how well engaged students are in their use. • Use lesson analysis of classroom videos to better understand STeLLA strategy D. • Deepen participants’ science-content knowledge of variations in plants and animals through lesson analysis.
12:00–12:45 45 min	LUNCH	
12:45–3:15 150 min (Includes 10-min break)	Content Deepening: Variations in Plants and Animals	<ul style="list-style-type: none"> • Deepen participants’ understandings of trait variation and the process of natural selection. • Deepen participants’ understandings of scientific methods used to determine whether genetics (inheritance) and/or the environment cause variation in traits. • Explore the evidence biologists collect to support the argument that traits evolve because of natural selection.
3:15–3:30 15 min	Wrap-Up: Summary, Homework, and Reflections	<ul style="list-style-type: none"> • Summarize and reflect on key ideas about SCSL strategies A, B, C, D, and I and the VPA science content, lesson plans, and lesson analysis work.

DAY 7

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>8:00–8:25 25 min</p> <p>Getting Started</p> <p>Slides 1–7</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Build community by sharing participants' reflections from day 6. • Set the stage for a day of learning. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review the day's agenda. • Discuss reflections from day 6. • Review and discuss progress on the RESPeCT program norms. • Read today's focus questions. <p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-7 Agenda (chart) • Norms for Working Together (chart) • Day-7 Focus Questions (chart) 	 	<p>Display Slide 1. RESPeCT PD Program (5 min)</p> <p>a. Take care of any housekeeping issues.</p> <p>Display Slide 2. Agenda for Day 7 (5 min)</p> <p>a. Talk through the agenda for the day.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process														
		<div style="border: 1px solid gray; padding: 5px;"> <p style="text-align: center;">Trends in Reflections</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%; text-align: center;">Lesson Analysis</th> <th style="width: 50%; text-align: center;">Science Content Learning</th> </tr> </thead> <tbody> <tr><td> </td><td> </td></tr> </tbody> </table> </div>	Lesson Analysis	Science Content Learning													<p>Display Slide 3. Trends in Reflections (5 min)</p> <p>a. Give participants time to review your feedback on their reflections from day 6 and offer reactions, comments, or follow-up questions.</p>
Lesson Analysis	Science Content Learning																
		<div style="border: 1px solid gray; padding: 5px;"> <p style="text-align: center;">Norms for Working Together: The Basics</p> <p>Purpose: Build trust and develop a productive study group for all participants.</p> <p>The Basics</p> <ul style="list-style-type: none"> • Arrive prepared and on time; stay for the duration; return from breaks on time. • Remain attentive, thoughtful, and respectful; engage and be present. • Eliminate interruptions (turn off cell phones, email, and other electronic devices; avoid sidebar conversations). • Make room for everyone to participate (monitor your floor time). </div>	<p>Display Slide 4. Norms for Working Together: The Basics (2 min)</p> <p>a. Review the norms and ask participants to think about areas where they could improve individually or as a group.</p> <p>b. “How do you think we’re doing individually and as a group applying these norms? Do you have any comments or suggestions about areas where we could improve?”</p>														

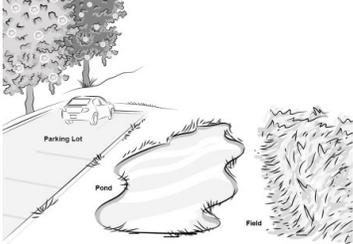

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Norms for Working Together: The Heart</p> <p>Purpose: Build trust and develop a productive study group for all participants.</p> <p>The Heart of RESPeCT Lesson Analysis and Content Deepening</p> <ul style="list-style-type: none"> • Keep the goal in mind: analysis of teaching to improve student learning. • Share your ideas, uncertainties, confusion, disagreements, questions, and good humor. All points of view are welcome. • Expect and ask questions to deepen everyone's learning; be constructively challenging. • Listen carefully; seek to understand other participants' points of view. 	<p>Display Slide 5. Norms for Working Together: The Heart (5 min)</p> <p>a. Review the norms that are at the heart of the RESPeCT program and ask participants to think about areas where they could improve individually or as a group.</p> <p>b. Emphasize: “We’re doing quite well with our norms, but as we approach the fall, I hope to see our interactions evolving so that you feel comfortable interacting less through your PD leaders as the ‘teachers’ and direct more of your questions and comments to one another, challenging each other, piggybacking on each other’s ideas, and listening carefully to one another so that everyone is contributing to the kind of productive analysis that will help us figure out ways to strengthen our students’ science learning.”</p> <p>c. Offer an opportunity for participants to comment on how the group is doing with these norms. Ask, “Are there any areas where we could improve? Any suggested changes?”</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process		
		<p style="text-align: center;">Today's Focus Questions</p> <ul style="list-style-type: none"> • How do you know when a content representation is appropriate and matched to the main learning goal? • How can we engage students in using content representations and models in meaningful ways? • How can we design experiments to test for genetic and environmental causes of trait variation? • How would biologists explain how a trait changes within a population over time? 	<p>Display Slide 6. Today's Focus Questions (1 min)</p> <p>a. Introduce the focus questions on the slide.</p>		
		<p style="text-align: center;">STeLLA Conceptual Framework</p> <p style="text-align: center;">Learning to analyze science teaching through two lenses</p> <div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 2px; text-align: center;"> STUDENT THINKING </div> <div style="border: 1px solid black; padding: 2px; text-align: center;"> SCIENCE CONTENT KNOWLEDGE </div> </div> <p style="text-align: center;">allows you to learn and use strategies for more effective science teaching.</p> <p style="text-align: center;">SCIENCE TEACHING</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; vertical-align: top;"> STRATEGIES TO REVEAL, SUPPORT, AND CHALLENGE STUDENT THINKING <ol style="list-style-type: none"> 1. Ask questions to elicit student ideas and predictions. 2. Ask questions to probe student ideas and predictions. 3. Ask questions to challenge student thinking. 4. Engage students in analyzing and interpreting data and observations. 5. Engage students in constructing explanations and arguments. 6. Engage students in using and applying new science ideas in a variety of ways and contexts. 7. Engage students in making connections by synthesizing and summarizing key science ideas. 8. Engage students in communicating in scientific ways. </td> <td style="width: 50%; vertical-align: top;"> STRATEGIES TO CREATE A COHERENT SCIENCE CONTENT KNOWLEDGE <ol style="list-style-type: none"> A. PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>8:25–9:00 35 min</p> <p>Introducing SCSL Strategy D</p> <p>Slides 8–10</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Deepen participants’ knowledge of the purpose and key features of SCSL strategy D. <p>Content</p> <ul style="list-style-type: none"> • Strategy D content representations can be especially useful in helping students see how the science content storyline fits together. Content representations (such as diagrams, analogies, graphs, concept maps, models, videos, simulations, and role-plays) can make science ideas more concrete and real for students. • Content representations are most meaningful when students are engaged in constructing and critiquing them. • Content representations support English language learners by providing a variety of ways for them to understand science ideas that extend beyond words. <p>What Participants Do</p> <ul style="list-style-type: none"> • Make, share, and discuss charts summarizing the purpose and key features of SCSL strategy D. • Discuss questions about strategy D. <p>Supplies</p> <ul style="list-style-type: none"> • Chart paper and markers 	<hr/> <p>Lesson Analysis: Focus Question 1</p> <p>How do you know when a content representation is appropriate and matched to the main learning goal?</p> <hr/> <p>SCSL Strategy D: Purpose and Key Features</p> <p>What are the purpose and key features of this strategy?</p> <p>Cite ideas and examples from the STeLLA strategies booklet and your SCSL Z-fold summary chart.</p>	<p>Display Slide 8. Lesson Analysis: Focus Question 1 (Less than 1 min)</p> <p>a. “Now let’s explore the first part of strategy D and our first focus question.”</p> <p>b. Read the focus question on the slide.</p> <hr/> <p>Display Slide 9. SCSL Strategy D: Purpose and Key Features (25 min)</p> <p>a. Small groups (13 min): Divide participants into two groups and have each group make a chart identifying the purpose and key features of strategy D described in their SCSL Z-fold summary charts and the STeLLA strategies booklet.</p> <p>b. Whole group (12 min): Have groups report out. Then ask, “What differences do you notice between the two charts?”</p> <p>Key ideas:</p> <ul style="list-style-type: none"> • Content representations can help students envision things that are too big or too small for them to see firsthand in the classroom, or processes that take place too quickly or slowly for them to perceive. • Content representations give students access to different ways of making sense of key science ideas. • If content representations or models are

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet • SCSL Z-fold summary chart (front pocket of PD binder) 	<div style="background-color: #cccccc; height: 15px; margin-bottom: 5px;"></div> <p>Strategy D: Discussion Questions</p> <ol style="list-style-type: none"> 1. How is this strategy similar to or different from selecting activities matched to the learning goal (strategy C)? 2. How might good content representations be especially helpful for English language learners? 	<p>closely matched to the main learning goal, they can be especially useful in helping students see how the science content storyline fits together.</p> <ul style="list-style-type: none"> • There are many different types of content representations (analogies, metaphors, and visual representations, such as diagrams, charts, graphs, concept maps, models, and role-plays). • Content representations can reveal and challenge student thinking if students are involved in creating, modifying, and analyzing the representations (instead of just listening to the teacher explain them). <hr/> <p>Display Slide 10. Strategy D: Discussion Questions (10 min)</p> <p>a. Whole group: Discuss the questions on the slide.</p> <p>Key ideas:</p> <ul style="list-style-type: none"> • Slide question 1: Both strategy C and strategy D emphasize that all activities must be matched to the main learning goal. Strategy D, however, emphasizes a very important kind of activity: content representations. It also emphasizes that teachers should actively engage students in creating, modifying, and using content representations. • Slide question 2: Good content representations can benefit all students, but they especially benefit ELL students because they present science ideas in pictures, images, and other visual formats

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			in addition to words.
<p>9:00–10:20 80 min (Includes 10-min break)</p> <p>Sample Analysis of Content Representations</p> <p>Slides 11–20</p>	<p>Purpose</p> <ul style="list-style-type: none"> Develop participants’ ability to analyze content representations to determine how well they match the main learning goal. Deepen participants’ science-content knowledge as it emerges from analyzing content representations. <p>Content</p> <ul style="list-style-type: none"> Six criteria are used in analyzing and selecting a content representation that is matched to the main learning goal. <p>What Participants Do</p> <ul style="list-style-type: none"> Study how Analysis Guide D is organized. Use the analysis guide to analyze three examples of VPA content representations (drawn from content deepening sessions or VPA lessons). <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> 7.1 Analysis Guide D (3 copies for sample analysis of content representations) <p>PD Resources</p> <ul style="list-style-type: none"> STeLLA strategies booklet RESPeCT lesson plans binder 	<p>Analysis Guide for Strategy D</p> <ul style="list-style-type: none"> Read Analysis Guide D (handout 7.1 in your PD program binder). Keep this question in mind: What do you notice about how this guide is organized? 	<p>Display Slide 11. Analysis Guide for Strategy D (6 min)</p> <ol style="list-style-type: none"> Have participants locate Analysis Guide D in their PD program binders (handout 7.1). Individuals: “As you read the analysis guide, keep in mind the discussion question on the slide.” Whole group: Discuss the question on the slide. <p>Key ideas:</p> <ul style="list-style-type: none"> This analysis guide focuses on the main learning goal by having participants review it first. The guide is divided into three parts. Part 1 focuses on how well matched the content representation is to the main learning goal. Part 2 focuses on how well engaged students are in using the content representation. The guide ends with identifying ways to improve the content representation and its use in a lesson (part 3).

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Content Representation 1: Three Environments</p> <p>Read the main learning goal and description of the content representation in Analysis Guide D1 (page 1 of handout 7.1).</p>	<p>Display Slide 12. Content Representation 1: Three Environments (2 min)</p> <p>a. Set the context: “Now we’re going to analyze a content representation to see how well it’s matched to the stated learning goal.”</p> <p>b. Have participants read the main learning goal and description of the content representation in Analysis Guide D1 (page 1 of handout 7.1).</p>
		<p>Content Representation 1: Three Environments</p>  <p>The diagram shows three distinct environments. On the left is a 'Parking Lot' with a car and several trees. In the center is a 'Pond' with a wavy, irregular shape. On the right is a 'Field' with a textured, grassy appearance.</p>	<p>Display Slide 13. Content Representation 1: Three Environments (8 min)</p> <p>a. Individuals: Have participants work independently on part 1 of Analysis Guide D1. Let them know that they can also find the slide diagram in their lesson plans binders (handout 4.4, Three Environments).</p> <p>b. Pairs: “Now pair up and discuss your answers to the analysis questions.”</p> <p>c. Emphasize that the content representation participants are analyzing is <i>not just the image</i> but the <i>entire activity</i>.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Does Content Representation 1 Match the Main Learning Goal?</p> <p>How did you answer these questions from part 1 of the analysis guide?</p> <ol style="list-style-type: none"> 1. Is the content representation scientifically accurate? 2. Is it closely matched to the main learning goal? 3. Does it present science ideas to students in comprehensible ways? 4. Does it reinforce/introduce any misconceptions? 5. Does it address common misconceptions? 6. Does it contain distracting details? 	<p>Display Slide 14. Does Content Representation 1 Match the Main Learning Goal? (10 min)</p> <p>a. Whole group: Discuss participants' responses to the questions in part 1 of Analysis Guide D1.</p> <p>b. Ask: "How might this content representation be improved? Would you use it with your students?"</p> <p>Observations:</p> <ul style="list-style-type: none"> • The content representation is scientifically accurate and closely aligned to the learning goal. • Ideally, students would think about the cottonwood-seed model used in VPA lesson 3 and the link to the idea that smaller cottonwood seeds would blow farther away from the parent tree, land in the open field, and grow into new cottonwood trees. • Students may think bigger means better, so the larger seeds would have a better chance of surviving regardless of where they land. <p>Take-home message: Trying to address all six criteria in the analysis guide is a balancing act or trade-off. To make complex science ideas meaningful and comprehensible to students, the content representation needs to be simplified, but simplifications can sometimes be misleading in terms of scientific accuracy. The important thing is for teachers to be aware of such problems so they can be addressed.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process												
		<p>Content Representation 2: A Dandelion Story</p> <ul style="list-style-type: none"> • Read the main learning goal and description of the content representation in Analysis Guide D2 (page 2 of handout 7.1). • Use your experience with this content representation to complete part 1 of the analysis guide. 	<p>Display Slide 15. Content Representation 2: A Dandelion Story (5 min)</p> <ol style="list-style-type: none"> Set the context for analyzing another content representation. Have participants turn to Analysis Guide D2 (page 2 of handout 7.1) and read the main learning goal and description of the content representation. 												
		<p>Content Representation 2: A Dandelion Story</p> <table border="1" data-bbox="905 889 1318 1138"> <thead> <tr> <th data-bbox="905 889 1010 914">Box 1</th> <th data-bbox="1010 889 1115 914">Box 2</th> <th data-bbox="1115 889 1220 914">Box 3</th> <th data-bbox="1220 889 1318 914">Box 4</th> </tr> </thead> <tbody> <tr> <td data-bbox="905 914 1010 1068">  </td> <td data-bbox="1010 914 1115 1068"></td> <td data-bbox="1115 914 1220 1068"></td> <td data-bbox="1220 914 1318 1068"></td> </tr> <tr> <td data-bbox="905 1068 1010 1138">Dandelions in the Park—before Mowing</td> <td data-bbox="1010 1068 1115 1138">Dandelions in the Park—after Mowing</td> <td data-bbox="1115 1068 1220 1138">Dandelions make new seeds.</td> <td data-bbox="1220 1068 1318 1138">Next year: What do the dandelion plants look like?</td> </tr> </tbody> </table>	Box 1	Box 2	Box 3	Box 4					Dandelions in the Park—before Mowing	Dandelions in the Park—after Mowing	Dandelions make new seeds.	Next year: What do the dandelion plants look like?	<p>Display Slide 16. Content Representation 2: A Dandelion Story (7 min)</p> <p>Individuals: Have participants work independently on part 1 of Analysis Guide D2. Let them know that they can also find the chart on the slide in their lesson plans binders (handout 5.2, What Will Happen to the Dandelions?).</p> <p>Note: If time is short, just do partner work.</p> <p>c. Pairs: “Now pair up and discuss your answers to the analysis questions.”</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Does Content Representation 2 Match the Main Learning Goal?</p> <p>How did you answer these questions from part 1 of the analysis guide?</p> <ol style="list-style-type: none"> 1. Is the content representation scientifically accurate? 2. Is it closely matched to the main learning goal? 3. Does it present science ideas to students in comprehensible ways? 4. Does it reinforce/introduce any misconceptions? 5. Does it address common misconceptions? 6. Does it contain distracting details? 	<p>Display Slide 17. Does Content Representation 2 Match the Main Learning Goal? (10 min)</p> <p>a. Whole group: Discuss participants' responses to the questions in part 1 of Analysis Guide D2.</p> <p>b. Ask: "How might this content representation be improved? Would you use it with your students?"</p> <p>Observations:</p> <ul style="list-style-type: none"> • Ideally, students will recognize that the mower will cut off the flowers of the taller dandelion, leaving only the flowers on the shorter dandelions to produce seeds that will fly away and grow into new dandelions. So the next generation of dandelions will have only short stems. • Students need to understand that the lawn mower will cut off the flowers of the taller dandelion. During the field test, however, many students thought that the flowers of both the taller and shorter dandelion plants would survive because the taller dandelion would bend, and the flowers wouldn't be cut off. • The storyboard for this activity is somewhat incomprehensible in its present form. It could be modified so that both the first and second frames are completed for students. <p>Note: Box 2 on PowerPoint slide 16 is overlaid with a white frame that can be removed to show the image underneath.</p> <p>Take-home message: Trying to address all</p>

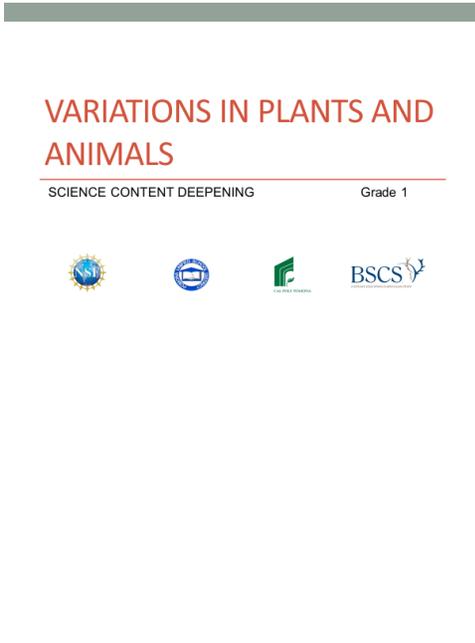

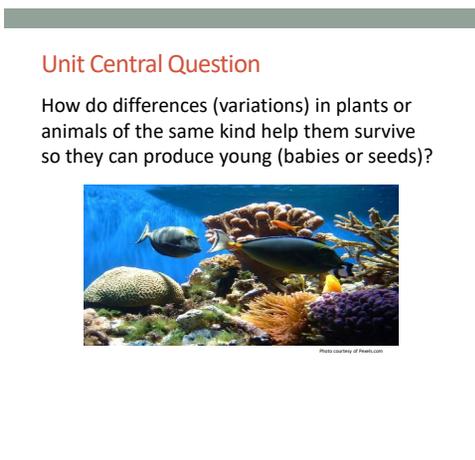

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>six criteria in the analysis guide is a balancing act or trade-off. To make complex science ideas meaningful and comprehensible to students, the content representation needs to be simplified, but simplifications can sometimes be misleading in terms of scientific accuracy. The important thing is for teachers to be aware of such problems so they can be addressed.</p>
		<p>Content Representation 3: Cottonwood-Seed Model</p> <p>Read the main learning goal and description of the content representation in Analysis Guide D3 (page 3 of handout 7.1).</p>	<p>Display Slide 18. Content Representation 3: Cottonwood-Seed Model (5 min)</p> <p>Note: If time is running short, this content representation can be skipped.</p> <p>a. Have participants turn to Analysis Guide D3 (page 3 of handout 7.1) and read the main learning goal and description of the content representation.</p>
		<p>Content Representation 3: Cottonwood-Seed Model</p> 	<p>Display Slide 19. Content Representation 3: Cottonwood-Seed Model (7 min)</p> <p>a. Individuals: Have participants work independently on part 1 of Analysis Guide D3.</p> <p>Note: If time is short, just do partner work.</p> <p>b. Pairs: “Now pair up and discuss your answers to the analysis questions.”</p>

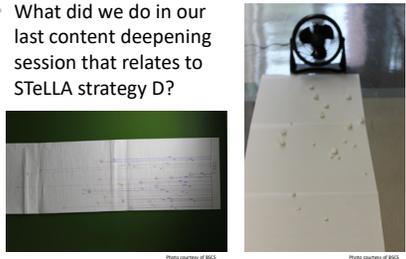

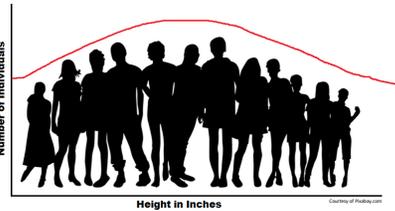

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Does Content Representation 3 Match the Main Learning Goal?</p> <p>How did you answer these questions from part 1 of the analysis guide?</p> <ol style="list-style-type: none"> 1. Is the content representation scientifically accurate? 2. Is it closely matched to the main learning goal? 3. Does it present science ideas to students in comprehensible ways? 4. Does it reinforce/introduce any misconceptions? 5. Does it address common misconceptions? 6. Does it contain distracting details? 	<p>Display Slide 20. Does Content Representation 3 Match the Main Learning Goal? (10 min)</p> <p>a. Whole group: Discuss participants' responses to the questions in part 1 of Analysis Guide D3.</p> <p>b. Ask: "How might this content representation be improved? Would you use it with your students?"</p> <p>Observations:</p> <ul style="list-style-type: none"> • The model is scientifically accurate to a degree. • The model is closely matched to the learning goal. • The model can be confusing for students, since there is nothing to represent the tree except a line on the butcher paper marked "Tree." The fan represents wind, and students act like the tree when they drop their cotton balls. <p>Take-home message: Trying to address all six criteria in the analysis guide is a balancing act or trade-off. To make complex science ideas meaningful and comprehensible to students, the content representation needs to be simplified, but simplifications can sometimes be misleading in terms of scientific accuracy. The important thing is for teachers to be aware of such problems so they can be addressed.</p>

Then advance to the core ideas for grade 3 on the next slide.</p>

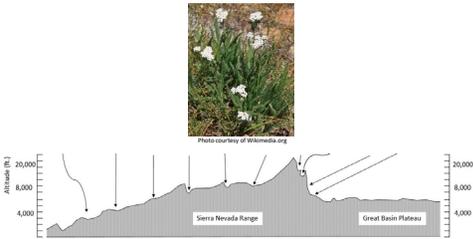

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>NGSS Standards: Inheritance and Variation in Traits</p> <p>Disciplinary Core Ideas for Grade 3</p> <p>LS3.A: Inheritance of Traits.</p> <ul style="list-style-type: none"> Many characteristics of organisms are inherited from their parents. (3-LS3-1) Other characteristics result from individuals' interactions with the environment, which can range from diet to learning. Many characteristics involve both inheritance and environment. (3-LS3-2) <p>LS3.B: Variation of Traits.</p> <ul style="list-style-type: none"> Different organisms vary in how they look and function because they have different inherited information. (3-LS3-1) The environment also affects the traits that an organism develops. (3-LS3-2) 	<p>Display Slide 36. NGSS Standards: Inheritance and Variation of Traits (2 min)</p> <ol style="list-style-type: none"> Read the NGSS Disciplinary Core Ideas for grade 3 on the slide. Note that students will revisit the content from grade 1 in grade 3. The lessons for grade 1 don't address inheritance, but one of the lessons in grade 3 does. Today's content deepening work will cover inheritance to give participants the background they need to teach the disciplinary core ideas related to inheritance and prepare them to teach the grade-3 lessons, if necessary. Ask participants, "How does our discussion about novelty-seeking behavior relate to these core standards?" [<i>Answer:</i> The standards talk about how both genetics and the environment can influence variation in traits.] "We haven't yet discussed how to determine the extent to which genetics and the environment influence a trait, but to prepare for answering this more difficult question, we'll investigate inherited traits passed from parents to offspring."

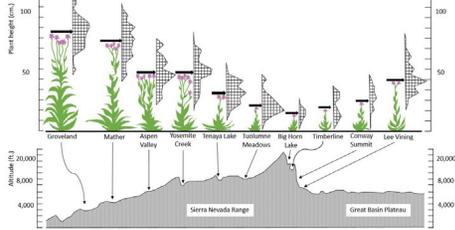

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<hr/> <p>Review Focus Question 1</p> <p>How can we design experiments to test for genetic and environmental causes of trait variation?</p>	<p>Display Slide 37. Review: Focus Question 1 (3 min)</p> <p>a. “One of the most powerful ways to approach this focus question is to explore traits in siblings who share identical DNA but were raised in different environments. By investigating traits in identical twins who were raised apart, we can determine whether genetics or the environment causes variation in a particular trait.”</p> <p>b. “What might we learn from such a research approach? What might the results tell us?”</p> <p>c. Emphasize that if a trait of identical twins shows variation, environmental differences must be the cause, since the twins share the same DNA.</p>
		<hr/> <p>Investigation 1: Genetics or Environment?</p>  <ul style="list-style-type: none"> • What would a graph look like for a trait in which all the variation is due to genetics? • What would a graph look like for a trait in which all the variation is due to environment? 	<p>Display Slide 38. Investigation 1: Genetics or Environment? (7 min)</p> <p>a. “Think about a graph that shows variations in height for 100 pairs of identical twins. For each pair, Twin 1’s height would be plotted on the y-axis, and Twin 2’s height would be plotted on the x-axis. The height for Twin 1 might be 172 cm, and the height for Twin 2 might be 165 cm.”</p> <p>b. Whole group: Walk participants through the hypothetical example of twin height variation and discuss the questions on the slide. Elicit a variety of predictions and</p>

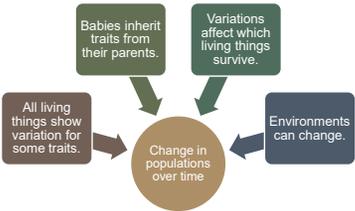

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>ideas.</p> <p>c. Individuals: Have participants draw two graphs in their science notebooks to illustrate their predictions. One graph should show genetics as the causal factor in the twins' height variations, and the other graph should show environment as the causal factor.</p>
		<p>Investigation 2: Genetics or Environment?</p> <p>All of the twins' height variation is due to genetics.</p> 	<p>Display Slide 39. Investigation 1: Genetics or Environment? (Less than 1 min)</p> <p>a. "This slide shows what a graph would look like if genetics caused all of the trait variation in the identical twins. Does your graph reflect these results?"</p> <p>b. "In this case, the height of one twin always matches the height of the other twin. The height trait shows a predictable pattern based on the identical genetic makeup of each twin, and environment plays no role at all in this trait."</p>
		<p>Investigation 1: Genetics or Environment?</p> <p>All of the twins' height variation is due to environment</p> 	<p>Display Slide 40. Investigation 1: Genetics or Environment? (Less than 1 min)</p> <p>a. "This slide shows what a graph would look like if environment caused all of the trait variation in the identical twins. Does your graph reflect these results?"</p> <p>b. "In this case, there is no identifiable pattern in the height trait of twins raised in different environments. None of the variation in this trait can be predicted based on the environment of each twin,</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="898 349 1304 414">Investigation 1: Genetics or Environment?</p>  <p data-bbox="898 649 1318 695">This graph shows the association between the novelty-seeking scores of identical twins who were raised apart.</p>	<p data-bbox="1400 256 1785 313">and genetics plays no role in the variation.”</p> <p data-bbox="1371 349 1896 406">Display Slide 41. 		<p style="text-align: center;">Investigation 3: Explaining Changes over Time</p>  <p style="text-align: center;">http://www.hhmi.org/biointeractive/making-fittest-natural-selection-and-adaptation</p>	<p>Display Slide 55. Investigation 3: Explaining Changes over Time (10 min)</p> <ol style="list-style-type: none"> “In this investigation, we’ll explore the evolution of fur color in rock pocket mice.” Distribute handout 7.6 (Developing an Explanation for Mouse Fur Color) and have participants read the introduction silently. Watch the beginning of <i>The Making of the Fittest: Natural Selection and Adaptation</i> and pause the video at the 2:37 time segment, where Dr. Nachman says, “Almost all of them.” Individuals: Have participants complete step 2 on the handout using the science ideas about variation in traits that they’ve learned about so far. Pairs: Have participants share their responses with an elbow partner. Whole group: Discuss participants’ answers to questions 2a and 2b on the handout. <p>Notes:</p> <ul style="list-style-type: none"> Question 2a: Participants aren’t yet expected to have a fully developed answer to this question, so don’t discuss all of the elements of a complete answer at this point. Participants will revisit this question later in the activity when they examine the Natural-Selection Explanation Table (handout 7.7). Then they should be able to provide a complete explanation that incorporates the major

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>principles of natural selection as follows:</p> <ul style="list-style-type: none"> • Variation: Within a population of mice living on the lava flow, some individuals had the dark fur trait and others did not. • Inheritance: The variations in mouse fur color are inherited (passed from parents to offspring). The origin of the variation stems from random genetic mutations. • Selection: More offspring are born than can survive, leading to competition within a species. In certain environments, individual mice that have dark fur will survive and leave more offspring than mice with tan fur. • Adaptation: The frequency of the mice with dark fur and the alleles that cause dark fur will increase in the population over generations. In this case, the population will change from one with most individuals having tan fur to one with most individuals having dark fur. • Question 2b: Address the common student misconception that new traits arise as needed. The mutation for dark-colored fur in rock pocket mice didn't occur simply because the mice needed it. Instead, the new trait arose due to random genetic mutations. Clarify that explanations for change based on the needs or wants of an individual are common but aren't scientifically accurate. Direct participants to the Common Student Ideas document in the resources section of their lesson plans binders.
