Mumford and Leroy's Big Crash, Conclusion

Energy is all around us, and we can detect it in many different ways. In Mumford and Leroy's big crash, you saw many of the ways energy can be detected! Energy moves and changes, but it can't be created or destroyed.

Mumford repaired his bike just in time for his next big adventure. He has a paper route. Have you ever had a paper route?

Mumford delivers newspapers only on weekends. He has to get up really early on Saturday and Sunday mornings. His route is in his neighborhood, so he knows most of his customers.

Mumford has a customer named Mrs. Thompson. She and Mr. Thompson live two doors down from Mumford. Their dog, Cotton, chews up their newspaper every morning before they can pick it up. Mumford is trying to figure out how he can let the Thompsons know their paper has arrived. That way they can get the paper before Cotton chews it up.

Mumford thinks he can make some kind of device that will ring a bell to let the Thompsons know their paper has been delivered. But Mumford needs your help. He thinks you can use what you've learned about energy to help him make this device. Do you think you can help Mumford solve his problem?
